JAMAAT FINANCIAL MANAGEMENT SYSTEM (JFMS)

Jamaat End User

Roles, Responsibilities & End-to-End Flow

Comprehensive Reference Document

Based on: JFMS Business Requirements Document (BRD) V1

Document Classification: Confidential

TABLE OF CONTENTS

1. Introduction & Overview

The Jamaat Financial Management System (JFMS) is a centralized, custom-built financial platform designed to streamline and modernize the financial operations of Jamaat Trusts and Waqfs across all Dawoodi Bohra communities worldwide. The system is structured around five primary operational fronts, of which the Jamaat End is the primary operational portal used by local Jamaat and Tanzeem committees at the Mauze level.

This document provides a complete and detailed account of the Jamaat End User – covering their roles, responsibilities, permissions, and the entire end-to-end functional flow from login to dashboards, as defined in the JFMS BRD V1.

1.1 What is the Jamaat End?

The Jamaat End is the core operational front of JFMS. It is used by Jamaat and Tanzeem Committee members via both a web platform and a mobile app. This is where all financial activities are conducted, including:

- Full-fledged accounting functionality (income, expenses, journal entries)
- Takhmeen setup, tracking, approval, and payment schedule management
- Digital banking integration, deposits, and reconciliation
- Inventory, asset, and in-kind donation tracking
- 5.convert it into CSV formate
- Multi-role access control (Admins, Operators, Aamil Saheb)
- Configurable environments per committee type (Sabeel, FMB, Construction, Generic Waqf/Trust, etc.)

The Jamaat End forms the backbone of JFMS for all legal entities and is the single most important operational module in the entire system.

1.2 Key Concepts

Mauze (Location) Types

Every location in the Dawoodi Bohra community is called a Mauze. These are classified into three categories:

- Ummal Mauze – A large Mauze with significant population, appointed Aamil Saheb, and its own registered Trust/Waqf.
- Masool ul Mauze – A mid-sized Mauze, often with its own Aamil; may or may not have its own Trust/Waqf.
- Mamureen Mauze – A smaller Mauze without its own Aamil; operations fall under a parent Mauze's Aamil Saheb.

Jamaat Committee vs. Tanzeem Committee

Both committees are functionally identical – they handle takhmeen assignment, income/expense tracking, event management, and subcommittee oversight. The key distinction lies in legal registration:

- Jamaat Committee – Associated with a Mauze that has its own registered Trust/Waqf. Members hold formal legal roles (President, Secretary, Trustee) recognized by Charity Commissioner/Waqf Board. Has actual signing authority on Trust documents and bank accounts.
- Tanzeem Committee – Associated with a Mauze that does not have its own Trust/Waqf and relies on a parent Mauze's Trust. Members are not legally recognized for financial decisions; financial execution is routed through the parent Trust.

Environments in JFMS

An Environment is a distinct operational and accounting unit assigned to a specific committee. Similar to how Tally allows multiple companies to be managed independently, JFMS uses environments to ensure each committee operates in a financially segregated manner. Environment types include:

- Sabeel Environment – Primary environment for Jamaat/Tanzeem Committees handling all major financial operations.

- FMB Environment – For the Faiz al Mawaid al Burhaniyah (FMB) Committee handling Thali operations, kitchen inventory, and food service management.
- Construction Project Environment – For temporary committees overseeing major construction projects.
- Other Committee Environments – For Madrasah, MSB/Schools, Burhani Guards, Daeratul Aqeeq, Toloba, etc.
- Generic Waqf/Trust Environment – Lightweight environments for additional Trusts/Waqfs managing Masjids, Madresahs, etc.

2. User Roles & Access Control

JFMS follows a strict Role-Based Access Control (RBAC) structure. Every user in the Jamaat End must be assigned exactly one predefined role. Roles are centrally defined at the Super Admin level with default permissions, but Environment Admins can customize individual user permissions as needed.

2.1 Role Templates (Defined at Super Admin)

The Super Admin defines global role templates, each including a role title, a granular permission matrix covering modules (Income, Payments, etc.), functional screens (Takhmeen Setup, Deposit Entry, etc.), and system features (Download reports, Approve payments, etc.).

Standard role titles include:

Role	Description & Responsibilities
Aamil Saheb	Highest religious and administrative authority. Full view access to all environments under his jurisdiction. Approves Takhmeen entries. Accesses JFMS via Amalat portal (SSO). Auto-assigned to all environments of his Mauze and Mamureen Mauze.
President	Senior committee leader with legal signing authority (in Jamaat Committees). Oversees all financial operations and approvals. May have full administrative access.
Secretary	Manages administrative and documentation functions. Handles correspondence, meeting records, and operational coordination within the environment.
Treasurer	Primary financial officer responsible for income collection, payment authorization, deposit management, and bank reconciliation. Key role in maker-checker workflows.
Accountant	Day-to-day accounting operations including receipt entry, payment recording, journal entries, ledger maintenance, and report generation.
Environment Admin	First user created when an environment is set up from Super Admin. Has full control over user management, permissions, and environment configuration. Can add/remove users, modify individual permissions, and reactivate deactivated users.
Finance Operator	Handles operational data entry tasks such as recording receipts, creating deposit slips, entering vendor bills, and processing routine payments.
Non-Mumin Staff	Non-community staff (accountants, office admins, clerical assistants) without ITS IDs. Added via phone number and email. Same access and permissions as any other user but not linked to ITS data.

2.2 Key RBAC Rules

1. Single Role Enforcement – A user can only hold one role within an environment. Multiple role assignments are not permitted.
2. Role-Based Permission Inheritance – When assigned a role, the user automatically inherits all default permissions. These can later be customized per-user without altering the base role.
3. Role Assignment is Mandatory – No user can exist in the system without being linked to a predefined role.
4. Export Permissions – Separate, granular permissions for PDF export and Excel export, assignable independently.
5. User Management Permission – Only users with this specific permission can view user listings, manage profiles, and modify other users' permissions.

2.3 Aamil Saheb – Special Access Rules

The Aamil Saheb has a unique position in the system with special handling:

- Logs in via the Amalat portal using SSO (not standard ITS credentials), with mandatory OTP verification.
- Automatically assigned to all environments under his Mauze and all Mamureen Mauze under him.
- Blocked from accessing environments of other Mauze, even if the Trust is shared.

- Granted full "view" access to all assigned environments for oversight purposes.
- When Aamil Saheb is reassigned to another Mauze (detected via ITS data), the system automatically revokes the outgoing Aamil’s access and grants identical access to the incoming Aamil.
- Receives email notification whenever a new user is added to any environment under his jurisdiction.

3. End-to-End Flow of the Jamaat End User

This section traces the complete journey of a Jamaat End user from initial system onboarding to daily operations, covering every step without omission.

3.1 Phase 1: User Creation & Onboarding

Step 1: User Addition by Super Admin

When a new Sabeel Environment is created at the Super Admin, the administrator specifies the first Environment Admin by entering their ITS ID. This person becomes the initial gateway to the Jamaat End.

Step 2: First-Time Login Setup

The designated user must complete a mandatory first-time setup process before gaining access:

1. OTP Verification of Contact Details – Phone number and email address are fetched from ITS and must be verified via OTP. If outdated, the user can update them (with fresh OTP verification on new details).
2. Security Questions Setup – The user must define three security questions and answers for identity recovery.
3. Mandatory Role Assignment Display – The role assigned during Super Admin setup is displayed and confirmed. Default permissions are auto-inherited.
4. Mandatory NDA Acceptance – A customized Non-Disclosure Agreement must be electronically signed using Aadhaar OTP authentication. If deferred, the system sends reminders every 30 days or at next login.

Step 3: Adding More Users

Once the Environment Admin completes setup, they access the Environment Admin Controls to add other users. For each new user, the admin must enter their ITS ID (or phone/email for non-Mumin staff), assign exactly one predefined role, and optionally customize individual permissions. An email notification is automatically sent to the Aamil Saheb for every new user added.

Step 4: Auto-Deactivation & Reactivation

If a user does not log in for a configurable number of consecutive days (set from Super Admin, e.g., 10 days), their account is automatically deactivated. The Environment Admin can manually reactivate such users. All deactivation events are logged for audit purposes.

3.2 Phase 2: Login & Authentication

Step 5: Login Methods

JFMS supports three login methods, all secured by mandatory two-factor authentication via OTP (delivered on both SMS and WhatsApp):

1. Login via Phone Number – Enter registered phone number, receive and verify OTP.
2. Login via Email Address – Enter registered email, receive and verify OTP.
3. Login via ITS ID + Password – Enter ITS ID and password, still requires OTP verification.

Each phone number and email must be unique to one ITS ID to prevent credential collision.

Step 6: Post-Login Environment Selection

After successful authentication, the user is presented with a Post-Login Environment Selector screen showing all environments they have access to. Each environment card displays: Environment Name, Environment Type (Sabeel, FMB, Generic, etc.), Associated Jamaat/Tanzeem, Trust/Waqf Name, and Mauze Name. Once an environment is selected, the session is scoped entirely to that environment. Users can hot-switch between environments without re-logging in.

Step 7: Account Recovery

Two recovery scenarios are supported:

- Logged-In Users – Can update phone number or email after OTP verification of the new contact.
- Locked-Out Users – Must validate via ITS authentication + correctly answer all three security questions. Then register a new phone/email through OTP verification.

3.3 Phase 3: Environment Administration (JE 4-SE 1)

Step 8: User Management

Users with the "User Management" permission have access to a User Listing Page and User Profile Page showing full name, photo, phone, email, ITS ID, last login time, and assigned role with permissions. They can add new users (Mumin via ITS ID, non-Mumin via phone/email), edit contact details, assign roles, and customize individual permissions.

Step 9: Sabeel No Master Setup

The Sabeel No system is the primary grouping mechanism for household-level financial records. Key rules:

- Each Sabeel No is unique within the environment (up to 15 characters, alphanumeric + symbols).
- Initial Sabeel Nos are created during data migration.
- Each Sabeel must have a designated Sabeel Head (default: Head of Family from ITS).
- A member can belong to only one Sabeel No within an environment.
- The system also supports a Mutawatteen Sabeel concept for members residing outside the Mauze.

Step 10: Bank Account Configuration

Each Income Purpose must be linked to a specific bank account for correct ledger postings and payment gateway routing. Changes to bank account linkages trigger a mandatory maker-checker approval process (pending Super Admin approval). Corpus and non-Corpus income purposes must never be mixed in the same bank account.

Step 11: Cheque Printing Configuration

The system allows configuring cheque layouts per bank account, with manual coordinate adjustment for all fields and print preview before final save.

Step 12: Data Export Permissions

Two separate permissions control exports: Export to PDF (digitally signed, tamper-proof documents) and Export to Excel (raw data for analysis). Export buttons are only visible to users who hold the relevant permission.

3.4 Phase 4: Takhmeen & Payment Schedules (JE 4-SE 2)

Step 13: Bulk Takhmeen via Groups

The annual Takhmeen process involves estimating household contributions for the year. Users create Takhmeen Groups per cycle year, define a common Takhmeen Structure (list of Income Purposes with preset amounts), and assign Sabeel Nos to the group. Applied Takhmeens are saved in Draft status pending Aamil Saheb approval.

Step 14: Individual Overrides & Standalone Creation

After bulk creation, users can edit individual purpose amounts per Sabeel, add/remove purposes, download printable Acknowledgement Summaries, and upload signed acknowledgements. Standalone Takhmeen can also be created for individual Sabeels outside the group framework.

Step 15: Aamil Saheb Approval

All Takhmeen entries – bulk or individual – remain in draft until explicitly approved by the Aamil Saheb (or a delegated user). The Aamil can view pending entries, make edits, approve/reject individually or in bulk, and add remarks.

Step 16: Payment Schedules

Once Takhmeen is approved, the system supports payment schedule management including installment tracking, due date management, and schedule modifications with audit trail.

3.5 Phase 5: Receipt / Income Entries (JE 4-SE 3)

Step 17: Takhmeen-Based Receipts

The most common income type. Users search for a Mumin's Takhmeen using ITS ID or Sabeel No, view all outstanding purposes for the year, accept payments for one or multiple purposes (including part payments), and choose the payment mode (Cash, Cheque, or Online Transfer). The system auto-generates receipts with unique receipt numbers for every transaction.

Step 18: Non-Takhmeen Receipts (Voluntary Contributions)

The system supports Other Voluntary Contribution Campaigns – time-bound collection drives that can be posted to the Mumin App for online payments. Receipts for voluntary contributions follow the same entry flow but are categorized separately.

Step 19: Cheque Handling

Cheque-based receipts require additional tracking: cheque number, bank name, date, and status tracking (received, deposited, cleared, bounced). Bounced cheques trigger specific reversal workflows.

Step 20: Receipt Cancellation & Corrections

Receipts can be cancelled with mandatory remarks and audit trail. Corrections follow the reversal-and-re-entry approach rather than direct editing, ensuring complete traceability.

3.6 Phase 6: Deposits (JE 4-SE 4)

Step 21: Cash Deposits

Cash collected must be deposited into bank accounts via Cash Deposit Slips. All cash deposits originate from the Cash in Hand ledger (not Petty Cash). Corpus-linked income can only be deposited into the designated Corpus bank account. Non-Corpus income cannot be mixed with Corpus accounts.

Step 22: Cheque Deposits

Cheque deposits follow similar corpus compliance rules. The system tracks cheque deposit slips with bank branch, date, and amounts. Cheque clearing status is monitored until reconciliation.

3.7 Phase 7: Payments / Expenses (JE 4-SE 5)

Step 23: Payment Entry

Payments are recorded against centrally defined Expense Categories and Subcategories mapped to Statutory Heads in the Chart of Accounts. Unlike income, expense subcategories are not tied to specific bank accounts – users can select any active account. The system uses ML-based suggestions for frequently used bank accounts per expense type.

Step 24: Payment Modes

Supported payment modes include: Cash (from Petty Cash), Cheque (with cheque printing support), Bank Transfer (NEFT/RTGS/IMPS), UPI, and Payment Gateway for online payments. Each mode has its own validation and ledger posting logic.

Step 25: Vendor Bill Management

A complete vendor bill lifecycle is supported: Bill entry with invoice details, three-way matching (PO-GRN-Invoice where applicable), approval workflows with maker-checker controls, payment scheduling with due dates, and automated payment request generation.

Step 26: Payment Approval Workflow

All payments above configurable thresholds go through a mandatory maker-checker approval process. The maker creates the payment request; the checker (authorized approver) reviews and approves/rejects. Multi-level approvals are supported based on amount thresholds.

Step 27: Petty Cash Management

A dedicated Petty Cash module handles small day-to-day expenses with voucher-based tracking, replenishment workflows, and periodic reconciliation.

Step 28: e-Mandate / Standing Instructions

For recurring payments, the system supports electronic mandates and standing instructions for automated bank debits, with success/failure tracking and retry mechanisms.

3.8 Phase 8: Hybrid Receipt & Payment Modules (JE 4-SE 6)

Step 29: Property Rent & Deposits Module

A specialized module managing the complete property rental lifecycle: Property selection from Waqf-synced list, tenant detail management, single or recurring rent tracking with schedule management, GST compliance, security deposit handling and refund processing, and auto-generated rent receipts. All rent operations are conducted exclusively within this module.

Step 30: Deshawar & Vajebaat Entries

Specialized income/expense categories unique to community financial obligations, handled through dedicated entry forms within the hybrid module.

3.9 Phase 9: Bank Reconciliation (JE 4-SE 7)

Step 31: Reconciliation Process

Reconciliation happens at the bank account level with three supported modes:

1. H2H (Host-to-Host) Integrated Reconciliation – Direct API-based bank feed integration with automatic matching by date, amount, and reference number. AI-powered suggestions with confidence percentages for unmatched items.
2. Manual Reconciliation – Upload bank statements in supported formats. System provides a matching interface for manual reconciliation of entries.
3. Hybrid Mode – Combines H2H and manual processes for environments using both.

Reconciliation does not affect accounting entries but serves as a control mechanism to track verified vs. pending transactions. Suspense Credits (unmatched bank credits) are tracked with ageing reports.

3.10 Phase 10: Assets & In-Kind Assets Management (JE 4-SE 8)

Step 32: In-Kind Donations Management

A dedicated module for accepting and classifying non-cash asset donations. Each donation is linked to a donor via Sabeel Number or ITS ID, classified as either Capital Asset (routed to Asset Register) or Consumable Inventory (routed to FMB Inventory Module), and tagged with mandatory categories. Optional uploads include valuation papers, photos, and legal documentation.

Step 33: Asset Register (Asset Master)

A comprehensive register for tracking all capital assets owned by the Jamaat, including acquisition details, depreciation (Written Down Value), disposal records, and periodic auditing. Assets are tagged, categorized, and linked to their source (purchase, donation, or migration).

3.11 Phase 11: Other Accounting Modules (JE 4-SE 9)

Step 34: Journal Entries

For non-cash, non-bank financial adjustments, JFMS provides a full Journal Entry module. Each entry requires: Entry Date, Debit and Credit Ledgers, Narration, and Reference Number. Entries must be classified by type (Adjustment, Accrual, Provision, Year-End). Debit and credit must balance; no direct Cash or Bank ledger entries are allowed. Each entry goes through an approval workflow (Draft → Submitted → Approved/Rejected) with complete audit trail.

3.12 Phase 12: Sabeel Profile (JE 4-SE 10)

Step 35: Profile Management & Safai Chitthi

The Sabeel Profile provides a 360-degree view of each household. Access is via Sabeel Number or ITS ID lookup. The profile displays: complete member list with names, ages, marital status, occupations, and photographs; Head of Family highlighted; full Takhmeen history and payment status; outstanding balances across all purposes; contribution patterns and trends. The system also supports generation of Safai Chitthi (clearance certificates) for members.

3.13 Phase 13: Other Modules (JE 4-SE 11)

Step 36: Tally-Compatible Export

A read-only export utility that converts JFMS financial data into Tally-compatible format (XML or Excel). Users select the date range, voucher types, and optionally include master data. Exported files are digitally stamped with environment name and timestamp. JFMS remains the system of record; Tally data is purely for interoperability during audits.

Step 37: Notification Centre

A centralized notification hub categorized into information, alerts, and reminders. Login digest highlights key activities since the last session. Covers pending approvals, collection updates, withdrawal alerts, reconciliation tasks, and compliance reminders.

3.14 Phase 14: Dashboards & Reports (JE 4-SE 12)

Step 38: Dashboards

Role-based, widget-driven dashboards providing real-time insights in three categories:

- Operational Dashboards – Daily financial and system activity monitoring (receipts today, payments pending, bank balances).

- Analytical Dashboards – Trend analysis, contribution behavior, variance tracking, and KPI visualization.
- Pendency Dashboards – Task management and compliance-driven follow-ups (pending approvals, overdue items, reconciliation gaps).

All dashboards include time selectors (Today, Yesterday, Past 7/15/30 days) and interactive widgets such as KPI cards, gauges, heatmaps, and graphs.

Step 39: Reports

Reports are categorized into Operational (daily registers: Receipt Register, Payment Register, Cheque Register, Cash Deposit Slip Register, E-Mandate Report, Petty Cash Voucher Register, Journal Entry Register, Asset Logs, Vendor Bill Register, Bank Reconciliation Statement, Trial Balance, Day Book), Analytical (budget vs. actual, contribution trends, expense analysis), and Pendency (Suspense Credits Ageing, Journal Vouchers Pending Docs, Vendor Bills Pending Approval, Vendor Payments Due Today). All reports are downloadable in PDF/Excel format and support drill-down within the app UI.

3.15 Phase 15: FMB Environment (JE 5)

Step 40: FMB Operations

The FMB Environment shares approximately 90% of Sabeel Environment functionality but adds specialized modules for food service operations:

- Purchase Orders (PO) – Create and manage purchase orders for kitchen supplies.
- Goods Receipt Notes (GRN) – Record actual quantities received vs. ordered, with variance logging and automatic inventory updates.
- Vendor Invoice Entry with PO-GRN Matching – Three-way matching for vendor payments; optional bypass for direct payment requests.
- Daily Cost Sheet Preparation – Log daily ingredient consumption, calculate per-day costs from inventory valuation, and generate item-level cost breakdowns.
- Inventory Management – Stock tracking, consumption monitoring, and reorder alerts.

FMB excludes certain Sabeel features like Sabeel Structure naming and uses “Thali No” instead of “Sabeel No.”

3.16 Phase 16: Other Environments (JE 6, 7, 8)

Step 41: Construction Project Environment (JE 6)

Lightweight environment for construction project committees with basic accounting, receipts, payments, and FMB-style operational flows (PO, GRN). Excludes Sabeel structure and Takhmeen.

Step 42: Other Committee Environments (JE 7)

Basic accounting environments for Madrasah, MSB/Schools, Burhani Guards, Daeratul Aqeeq, and Toloba committees. They include receipts, payments, and ledger setup but exclude Sabeel structure, Takhmeen, and Voluntary Contribution Campaigns.

Step 43: Generic Waqf/Trust Environment (JE 8)

Lightweight environments for additional Trusts/Waqfs managing specific assets like Masjids and Madresahs. They support Voluntary Contribution Campaigns but exclude the full Takhmeen lifecycle, Deshawar & Vajebaat, and FMB operational modules.

3.17 Phase 17: Data Migration (JE 9)

Step 44: Data Migration Toolkit (DMT)

A guided wizard-based migration tool for transitioning legacy data into JFMS, managed by the local committee. The DMT follows an 8-stage process:

1. Stage 1: Sabeel & ITS Master Setup – Load/verify all member records.
2. Stage 2: Chart of Accounts Mapping – Map existing Tally ledger names to JFMS-standard CoA using fuzzy match suggestions.
3. Stage 3: Opening Balances & Bank Book Setup – Enter Opening Trial Balance, bank ledger balances, and cash on hand.
4. Stage 4: Outstanding Member Takhmeen – Upload Sabeel-wise unpaid Takhmeen amounts with purpose breakdown.
5. Stage 5: Vendor Liabilities & Advances – Input pending vendor bills and advance payments.
6. Stage 6: Fixed Asset Register – Enter asset descriptions, costs, and depreciation details.
7. Stage 7: Master Data Alignment – Clean up vendors, bank accounts, and income/expense purpose mappings.
8. Stage 8: Final Review & Sign-Off – Central team reconciliation and freeze of migrated data.

3.18 Phase 18: Support & FAQs (JE 10)

Step 45: Self-Service Support

JFMS provides a comprehensive multi-modal support framework:

- Onboarding Walkthroughs – Step-by-step interactive guides during initial setup.
- Context-Aware In-App Guides (DAP) – Smart overlays and tooltips based on current screen/module.
- AI-Powered KB Search Bot – LLM-based chatbot for searching knowledge base articles and documentation.
- Micro Video Lessons & Interactive Simulations – 1-3 minute videos and click-through simulations.
- Dynamic FAQs by Screen – Evolving FAQ bank linked to relevant roles and actions.
- Ticket-Based Helpdesk Integration – Raise support tickets from within JFMS for unresolved issues.

3.19 Phase 19: Jamaat End Mobile App (JE 11)

Step 46: Mobile App Functions

The Jamaat End Mobile App extends JFMS functionality for on-the-go use with the same role-based access controls:

1. Approval Management – View pending approvals, open associated documents, and approve/reject with remarks directly from the app.
2. Member Profile Lookup – Search and access condensed Sabeel Profiles via ITS ID, Sabeel No, or Thaali No.
3. Income Entry (Mumin-Linked Only) – Record Takhmeen-based and voluntary contributions on the go. Complex income types (rental, deposits, corpus) remain web-only.
4. Mobile Invoice Scanning – Capture vendor invoices via camera, auto-attach to payment requests, and submit for approval. Replaces physical scanners for field operations.
5. Notification Centre – Categorized notifications with login digest for quick operational awareness.

4. Summary: End-to-End Flow at a Glance

The following table summarizes every phase and step of the Jamaat End user journey:

#	Phase	Key Steps	BRD Reference
1	**User Onboarding**	Super Admin adds first user, First-time setup (OTP, Security Qs, NDA), Add more users	JE 3-8 to JE 3-15
2	**Login & Authentication**	3 login methods + mandatory OTP, Environment selector, Hot-switching	JE 3-1 to JE 3-24
3	**Aamil Saheb Access**	SSO via Amalat, Auto-assign to Mauze environments, Full view access	JE 3-25 to JE 3-32
4	**Environment Admin**	User management, Sabeel No setup, Bank config, Export permissions	JE 4-SE 1 (1-65)
5	**Takhmeen Lifecycle**	Bulk groups, Individual overrides, Aamil approval, Payment schedules	JE 4-SE 2 (1-8+)
6	**Receipt / Income**	Takhmeen receipts, Voluntary contributions, Cheque handling, Cancellations	JE 4-SE 3
7	**Deposits**	Cash deposit slips, Cheque deposits, Corpus compliance enforcement	JE 4-SE 4
8	**Payments / Expenses**	Payment entry, Vendor bills, Approval workflows, Petty cash, e-Mandate	JE 4-SE 5
9	**Hybrid Modules**	Property Rent & Deposits, Deshawar & Vajebaat entries	JE 4-SE 6
10	**Bank Reconciliation**	H2H integration, Manual upload, AI-assisted matching, Suspense tracking	JE 4-SE 7
11	**Assets Management**	In-kind donations, Asset register, Depreciation tracking	JE 4-SE 8
12	**Other Accounting**	Journal entries with approval workflow, Voucher generation	JE 4-SE 9
13	**Sabeel Profile**	360-degree household view, Safai Chitthi generation	JE 4-SE 10
14	**Other Modules**	Tally export, Notification Centre	JE 4-SE 11
15	**Dashboards & Reports**	Operational/Analytical/Pendency dashboards, 20+ report types	JE 4-SE 12
16	**FMB Environment**	PO, GRN, Invoice matching, Daily cost sheets, Inventory	JE 5
17	**Other Environments**	Construction, Madrasah, MSB, Burhani Guards, Generic Waqf/Trust	JE 6, 7, 8
18	**Data Migration**	8-stage DMT wizard, Legacy data transition	JE 9
19	**Support & FAQs**	DAP, AI chatbot, Video tutorials, Helpdesk tickets	JE 10
20	**Mobile App**	Approvals, Profile lookup, Income entry, Invoice scanning, Notifications	JE 11

5. Summary of Jamaat End User Responsibilities

5.1 Administrative Responsibilities

- Manage environment users – Add, deactivate, reactivate, and assign roles to committee members and staff.
- Configure environment settings – Set up Sabeel Nos, bank accounts, income purpose-to-bank linkages, and cheque layouts.
- Maintain data integrity – Ensure Sabeel master data is accurate, complete, and reconciled with ITS records.
- Handle data migration – Execute the DMT wizard to transition legacy financial data into JFMS.
- Manage export permissions – Control who can export data in PDF/Excel formats.

5.2 Financial Operations Responsibilities

- Execute the annual Takhmeen lifecycle – Create, review, override, and submit for approval all household contribution estimates.
- Record all income transactions – Takhmeen-based receipts, voluntary contributions, rent income, and in-kind donations.
- Process all payments – Vendor bills, operational expenses, petty cash, bank transfers, and e-mandates.
- Manage deposits – Create cash and cheque deposit slips with full corpus compliance.
- Perform bank reconciliation – Reconcile all bank accounts via H2H feeds, statement uploads, or hybrid mode.
- Maintain the Asset Register – Track capital assets from acquisition through depreciation to disposal.
- Record journal entries – Handle accounting adjustments, accruals, provisions, and year-end entries.

5.3 Compliance & Oversight Responsibilities

- Ensure FCRA compliance – Maintain proper segregation of foreign and domestic contributions.
- Follow maker-checker workflows – All critical financial changes require dual approval.
- Maintain audit trails – Every action is logged with user, timestamp, and status for audit readiness.
- Respect corpus segregation – Never mix corpus and non-corpus funds in the same bank account.
- Accept and sign NDAs – Each user must electronically sign their NDA via Aadhaar OTP.
- Monitor dashboards and reports – Use operational, analytical, and pendency dashboards for daily oversight.
- Support auditors – Generate Tally-compatible exports and provide digitally signed reports for external audits.

5.4 Communication Responsibilities

- Notify Aamil Saheb – System automatically notifies the Aamil for user additions; users should ensure proper approvals.
- Generate and distribute receipts – Ensure timely receipt generation and distribution to contributors.
- Manage the Notification Centre – Monitor alerts, reminders, and pending action items.
- Use in-app support channels – Leverage walkthroughs, FAQs, AI chatbot, and helpdesk tickets for issue resolution.

--- End of Document ---
